August 2010

Dear Cattle Breeders

We have great pleasure in presenting our Spring Bull Sale Catalogue. We will be offering 42 bulls on Wednesday 8th September at 2pm – PLEASE NOTE NEW DATE AND TIME OF SALE.

This years' line up of sale bulls are a powerful group of young bulls, pushing the boundaries for B3 and the grass fed beef markets. "We have some rippers for calving ease and B3. Dinki is one of the best calving ease sires being in the top 1% of the breed." Our photos were taken during the 70mls of rain. Wet . . wet . . wet! Water everywhere. Fantastic to have the run off and dams filling. A great season.

We will continue to offer clients an incentive program. If you purchase 5 bulls, we will offer a 5% discount.

All bulls have just been scanned for carcase traits. Updated carcase ebv's will be available on sale day. If you would like these prior to the 8th, please give us a call and we will email or fax them through.

There has been much speculation regarding DNA testing and recessive genetic conditions in the Angus breed. We know that all animals and humans carry copies of undesirable recessive genes. They have been around forever. DNA tests are the latest and greatest allowing better understanding of herd genetic management. Bulls with relevant pedigrees in this sale are tested for AM and NH. These results are indicated in the catalogue. AMC and NHC mean that they are carriers of this recessive gene. Please give us a call if you would like to discuss this in more detail, or all information is available on the Angus Australia website www.angusaustralia.com.au

We are thrilled to welcome Stephen Baker as Assistant Manager to our team! Stephen, Sarah, Chloe and William have moved from S.A. and we look forward to introducing them to you. Stephen will be an integral part of our Livestock Team.

We would like to acknowledge Ian Mason's contribution to Weerangourt, and in particular the sheep program over many years, and thank him for his time with the Moore family.

We extend an invitation to attend our sale and bbq lunch. The bulls will be available from 12 noon on sale day or by appointment prior to the 8th. We look forward to showing you the advantages of the Weeran program. Please feel free to give us a call if you would like to discuss your program.

Kind regards,

Alec, Jo, Claire, Lucy and Olivia Moore

WEERAN BULL GUARANTEE

The Guarantee will be comprehensive covering all causes of a bull's loss of fertility. The period of cover will be 12 months or a 9 week joining, which ever comes first. The Guarantee will be in the form of a replacement bull and/or credit to the value of your purchase, and the problem animal will become the property of Weeran Angus. In the case of loss of use due to death or accident under the new owners management i.e. broken legs, shoulders etc a replacement bull will be supplied, if available, for the imminent joining if required, at no expense to the client. The client may purchase the replacement loan bull at a later date if decided or return it to Weeran Angus control. To receive this level of cover Weeran Angus must be contacted within 7 days of injury. Weeran Angus will arrange an approved vet at shared expense to evaluate and treat animal, if required. The animal must be maintained at an optimum level of health and nutrition at all stages. Illness due to starvation and/or parasites will leave cover null in void. It is recommended that joining mobs do not exceed 50 females and that multiple mating of joining groups be avoided if possible.

WEERAN GUARANTEES

Be sure of a catalogue ~ BRING THIS ONE WITH YOU

HISTORY & BREEDING PRINCIPLES

Weeran Angus welcomes you to the fourth annual spring bull production sale.

The Weeran herd is a commercial angus herd that was founded by my parents, Owen and Mary Moore in the early 50's. We have continued to strive for greater productivity for many years with performance recording of our herd commencing in the early 70's. Weeran's genetic base has developed over the years using proven AI sires.

Breeding Aims

- To produce highly fertile females who will calve over a 4-6 week period in every breeding season.
- Structural soundness of feet and legs and general athleticism of our stock is of the utmost importance.
- Constitutional strength to maintain productivity under high stocking rate regimes.
- High growth rate performance with a quality carcase to satisfy the high quality marbling export markets and our own domestic market.
- Easy care, easy handling, quiet cattle who will go about their business of producing kilos of beef per hectare without fuss or bother.

Philosophy with information collection

- To fastidiously collect production data and technical information on the entire Weeran herd.
- All bulls have received at least 6 weighings during their lifetime and have been measured for all useful production traits. These are fat depth, eye muscle area, intramuscular fat and scrotal circumference.
- No trimming of feet has ever occurred.

Genetic Inputs & Management

In an ongoing effort to source and multiply the best genetic material available, embryo transfer programmes have been introduced in 1995. Extensive AI has been in

place for many years to add to our genetic bank. Rapid genetic turnover with yearling bulls being introduced to the herd is a regular practice.

Marketing & Breeding Principles

We have an excellent association with Richard Eldershaw of Rangers Valley Cattle Station, who have purchased our entire drop of feeder steers for the last 11 years. An innovation which Rangers Valley have introduced, is the meeting of the Japanese Agricultural System of QA so that product trace back showing property of origin and all production activities ie. drenching, vaccine etc, are available to the buying public.

Commercial Focus

Our cattle run with sheep and are stocked at significantly above district average stocking rates, with high production of a quality product per hectare our aim. We have every confidence in our livestock to perform in a commercial environment.

IBMS GENETIC TYPE SUMMARY (GTS)

Dick Whale

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in this catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

Descriptive Traits

Stature - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

Capacity - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

Body Length - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. Muscle - Scores higher than 25 indicate above average muscle.

Doing Ability - Ability to lay fat relative to their peers under common management system.

Structural Soundness Traits

The system is aimed at being as simple as possible.

All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 25 is the optimum.

Scores of 23/24 and 26/27 represent a slight variation from ideal. These animals would be acceptable in most breeding programs.

Alec, Jo, Claire, Lucy & Olivia Moore

Scores of 21/22 and 28/29 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 20 or 30 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale

Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal.

Many thanks to Dick Whale for assessing all sale bulls.

PERFORMANCE INFORMATION

Only ANGUS GROUP EBV'S with Accuracy's (ACC) from the National Angus Evaluation (Group Breedplan) can be validly compared between herds.

ACC (Accuracy)

Accuracy's are presented with every EBV and give an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animals EBV as more information is analysed for that animal and its relatives.

BIRTH WEIGHT EBV

This EBV gives an estimation of the animals breeding value for birth weight.

200 DAY GROWTH EBV

Estimation of the animals genetic merit for 200 day growth calculated independently of the maternal milk effect.

400 DAY WEIGHT EBV

This EBV gives us an estimation of the animals yearling weight potential.

600 DAY WEIGHT EBV

This EBV is an estimation of the animals genetic potential for growth to 600 days (or 18 months).

200 DAY MILK EBV

This EBV gives us an estimation of the animal's milking potential. The value is calculated from the weaning weights of the animal's progeny and other relatives. The 200 day milk EBV is calculated independently from 200 day growth.

GESTATION LENGTH

A minus "-" GL EBV is good because calves born earlier (less days in gestation) are older at weaning and therefore heavier. A shorter (-) EBV will moderate the effect of birth weight and thus enhance calving ease generally.

SCROTAL SIZE EBV

"+" is good or 'bigger is better' as we tend to use more yearling bulls. "+" is also good because of the favourable association between "+" SS in bulls and "-" DC in female relatives.

CARCASE WEIGHT (kg's)

Estimates of the genetic differences in carcase weight, adjusted to 650 days of age.

EYE MUSCLE AREA (EMA)

Estimates of the genetic differences in eye muscle area (Square cm) at the 12/13th rib site, in a 300kg carcase.

RIB FAT (mm)

Estimates of the genetic differences in fat depth (mm) at the 12/13th rib site, in a 300kg carcase.

RUMP FAT (mm)

Estimates of the genetic differences in fat depth (mm) at the P8 rump site in a 300kg carcase.

INTRA-MUSCULAR FAT % (IMF%)

Estimates of genetic differences in percentage intra-muscular fat (marbling) at the 12/13th rib site in a 300kg carcase.

SCROTAL SIZE (SS)

Bulls 18 months or older should have a scrotal circumference of no less than 30cms.

Bulls with larger testicles (over 36cms) can achieve a higher conception rate and can be joined to more cows than bulls with moderate (30-36cms) testicles. High SS bulls are known to breed more fertile females. The SS measurements for these sale bulls were measured 9th August, 2010.

JAPANESE B3 \$INDEX (B3)

Suitable for a self replacing commercial herd in temperate Australia targetting the production of steers for the long fed export markets that value marbling.

CAAB \$INDEX

Suitable for a self replacing herd in temperate Australia targetting the production of steers for the Certified Angus Beef TM program.

DOMESTIC SUPERMARKET \$INDEX (SM)

Suitable for a self replacing herd in temperate Australia targetting the production of grass finished animals for the domestic supermarket trade with no marbling requirement.

NORTHERN TERMINAL \$INDEX (NT)

Suitable for a commercial crossbred herd in Northern Australia using Angus sires over tropically adapted cows to produce terminal progeny to be grain fed for the Japanese B2 market.

CLIENT PURCHASE INCENTIVE

Weeran Angus will be offering our clients an incentive program. If you purchase 5 bulls, we will offer a 5% discount.

Elders Auctioneer, Ross Milne

BULL MANAGEMENT

Weeran Angus would like to make some suggestions to assist your newly purchased bull settle into it's new environment, keeping in mind that it has now left the security of it's home and companions, for possibly the first time.

Settling In:

- Majority of bulls have been running in a large mob.
- Once unloaded, ensure he has company (eg cow or steer) and plenty of food in front of him, until he is able to be placed into his mob.
- Don't box bulls up too much - majority of breakdowns are caused in the bull paddock where the new bull is unloaded directly into the home mob.
- Be aware that it is a new environment to them and some time in the yards may be required.
- Remember the pecking order scenario with other bulls - the newest addition may receive a hard time for a little while.
- They are used to being treated in a gentle manner and will respond accordingly, and should be treated with respect and kindness.

Joining Time:

- All bulls should be serving tested to ensure they are sound, prior to going out for mating.
- Once they are out, please check them regularly to make sure they have not had a breakdown, moved paddocks etc. This practice is essential!
- Always put a back up bull in for a couple of weeks to cover yourself.
- Don't mate horn bulls and poll bulls together. Single mating is preferred. If multiple joining, put in bulls that have been together prior to joining and ensure they are roughly the same age, weight and size.

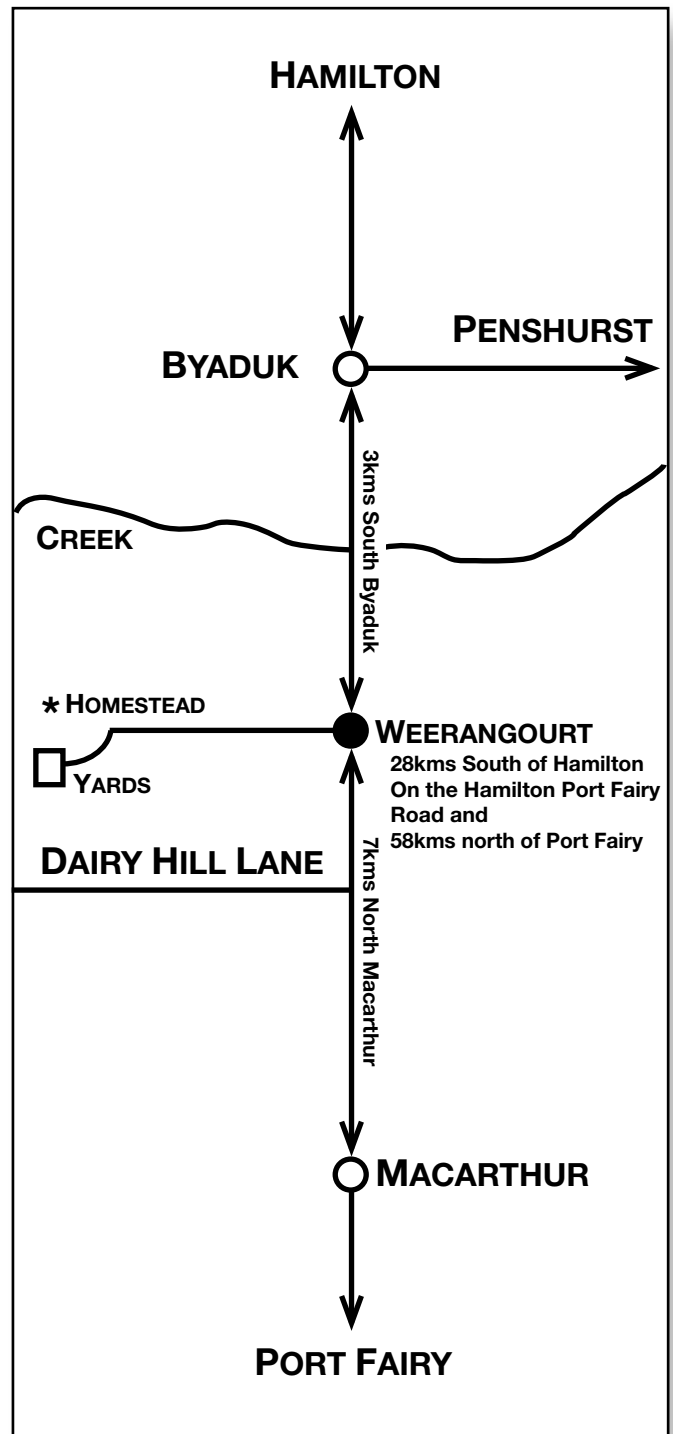

After Joining:

- Try and split bulls up. If finding suitable paddocks is a problem, consider running mature bulls with sheep to allow this split up.
- After taking them out of their joining mobs, have plenty of feed in front of them. This will ensure minimum fighting.

The Angus GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agriculture Business Research Institute (ABRI) from data supplied by the breeders. Neither the Angus Society of Australia nor the ABRI oversee or audit the collection of this data.

DELIVERY

Weeran will organise delivery of your purchases free of charge up to 150kms. Over and above this by negotiation.

NAREEN STATION

We have been purchasing Weeran bulls since 1998. Apart from their genetic merit, we have been impressed by their temperament and the after sales service by Alec and Jo. These bulls work twice a year and easily retain their health and vigour.

Grant Little (Manager) and Gordon Dickinson, Nareen Station, Nareen.

MURROA EAST

Anna and I have been buying some of the best Weeran Genetics for over ten years. Since we started purchasing Weeran bulls our female herd has gone from strength to strength. Our cows have more length and stretch with depth of body. Our females have good feminine characteristics that milk well and wonderful 'doing ability' to look after both calf and themselves.

Since buying Weeran Bulls our steer calves have become highly sort after because of their ability to finish on grass or in feedlots. With Weeran genetics I have very few 'tail end' cattle that don't meet market specifications. Weeran genetics have given me confidence to meet all market specifications which ever market I am aiming for. Weeran cattle finish faster and better than most other seed stock producers.

Peter Delany, Murroa East Pastoral, Hamilton.

NEW TEAM MEMBER

Weeran Angus are thrilled to welcome Stephen Baker as Assistant Manager to our team! Stephen, Sarah, Chloe and William have moved from S.A. and we look forward to introducing them to you.

Stephen will be an integral part of our Livestock Team.
