WELCOME TO WEERAN ANGUS

Dear Cattle Breeders,

What an exciting last 12 months at Weeran Angus. We have calved down 970 females and invested in two high performing walking sires for our stud Waitara Quidditch BSCQ43 and Dunoon Quambatook BHRQ317. Super excited for their genetics!

We have expanded our team with Jack Dowell and Phil Lynch joining us to work alongside Leah Drendel and Bryce McDonald and the Moore family. An awesome team who we are thrilled to have!

We have run very successful ET programs with Rob Pashen from AA Genetics utilising our donor families we have put together over the last few years. Team this with investment in ai sires with proven performance, we are thrilled with the quality of performance we have in the Weeran herd. Genomics continue to play a very important role in our program giving us, and you, the most accurate information available for each individual animal. Very exciting times as we move forward with our program!

We will be offering 76 Angus Bulls in this Spring sale on 6th September. For the same sale last year we offered 58 with a complete clearance in a very strong sale. This year we have maintained the

excellent quality and increased sale numbers of high performance bulls with calving ease and carcass acumen. 80% of the catalogue is suitable for heifer joinings. Add carcass and performance, and we are very excited with our offering. Please note Lots 1, 2, 3, 4, 5, 7, 8, 9 and 11 have been used at Weeran in the Spring Joining.

Reference Sires for this sale include Lawsons Blue Bagger, Lawsons Momentous, Witherswood Bronc, Mogck Enrich, Weeran Notable N75, Beast Mode, Compass, Sydgen Enhance and Weeran Hooper!

Our upcoming field day on the 30th August has an exciting new element, joining forces with Upper Murray Seeds showcasing their demonstration site, alongside Weeran's bull inspection day. UMS will have a walk and talk through sessions at 10.30 and 2.30. The site showcases a range of highly productive grasses, clovers, lucernes and forage cereals.

Thank you to the many clients and friends who support the Weeran program. It is very much appreciated.

We look forward to welcoming you to Weerangourt.

Kind regards
Alec & Jo Moore

HEIFER BULL SELECTION CRITERIA

Heifer bull recommendations are the combination of Calving Ease EBV's, Birthweight EBV, pedigree history and actual birthweight, which gives me confidence to recommend them for heifer matings!

It is not an exact science, but a recommendation!

DELIVERY

We will deliver all bulls based on the following per bull.

Up to 100kms \$50

Up to 300kms \$100

Over 300kms by negotiation

FREE DELIVERY FOR 5 BULLS AND OVER

ALL SALE BULLS COMPREHENSIVELY GENOMICALLY TESTED

HEALTH STATUS FOR ALL SALE BULLS

1. Semen Quality Tested

2. Drenched and 7 in 1 Vaccination

3. One Pestigard Vaccination and One Vibrovax Vaccination to all Sale Bulls

SEMEN RIGHTS

Weeran retains semen rights on all sale bulls for use in Weeran herd. If required, Weeran will organise and collect semen at our expense and at your convenience.

GENETIC CONDITIONS

All sale bulls have been tested for known genetic conditions, and results are printed in the catalogue. For further information, please refer to Angus Australia website... www.angusaustralia.com.au

COMPREHENSIVE GUARANTEE & SUPPLEMENTARY CATALOGUE INFORMATION

IF YOU EXPERIENCE ANY PROBLEMS, PLEASE MAKE SURE WE ARE THE FIRST CONTACT TO ENSURE WE CAN HELP YOU!

Visit www.weeranangus.com.au for full details

IBMS GTS GRADING

IBMS GENETIC TYPE SUMMARY (GTS)

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in the catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

DESCRIPTIVE TRAITS

Stature - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

Capacity - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

Body Length - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. **Muscle** - Scores higher than 25 indicate above average muscle.

Doing Ability - Ability to lay fat relative to their peers under common management system.

Muscle Score - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores : 25 = C muscle 30 = C+ 35 = B- 40 = B 45 = B+

Sheath - To maximize a bulls effective servicing of cows the sheath needs to be 'tight' and parallel with the underline. The navel must not be too expressive. Scores: 5 = Excellent: very tight, parallel with underline, very little navel.

4 = Very Good: tight, almost parallel with underline, slight navel.

3 = Acceptable: not so tight, angle increasing, some navel.

2 = Undesirable: pendulous, increased angle, navel very evident.

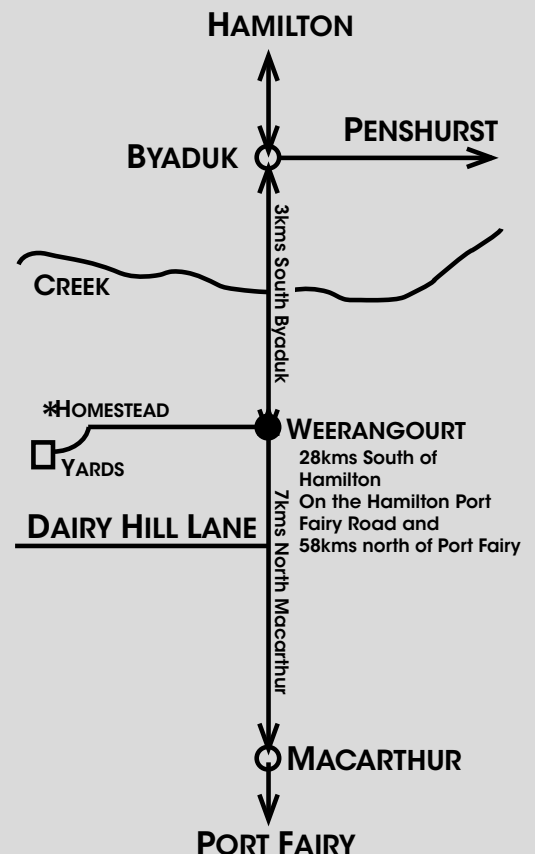

1 = Very Undesirable: very pendulous, too much angle, too much navel.

STRUCTURAL SOUNDNESS TRAITS

The system is aimed at being as simple as possible. All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 5 is optimum. Scores of 4 or 6 represent a slight variation from ideal.

These animals would be acceptable in most breeding programs. Scores of 3 and 7 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 2 or 8 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Many thanks to Dick Whale for assessing all sale bulls. WEERAN GUARANTEES!

ANGUS AUSTRALIA EBV'S

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
Days to Calving	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
Carcase Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
FEED EFFICIENCY			
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

**UPPER MURRAY SEEDS DEMONSTRATION SITE AT WEERANGOURT
WILL BE OPEN ON OUR COMBINED FIELD DAY ON 30TH AUGUST**

Blue Bagger oozes carcass in the flesh and also in his data! A Tuwharetoa Regent grandson, out of a Lawsons Bartel E7 dam. We purchased the bull at the 2019 Lawson sale selecting him for his outstanding calving ease, growth and carcass performance. He has an EBV chart which reads like a Manhattan Skyline, with bar graphs virtually all on the right. He is top 1, 2 and 5% for all indexes. He has been used in 8 herds with 264 progeny analysed. He has added calving ease, growth and carcass to the Weeran program.

The Witherswood Dispersal sale in 2018 gave the industry access to some top genetics from the very passionate breeding program of John and Joan Woodruff, and Ian Peake. We have been delighted with the donors selected to join our program and to now see one of our donors progeny now in our reference sire list, Witherswood Bronc! This is the first progeny to be sold from Bronc with many more to come through the program. He was 8 weeks old when we spotted him at the dispersal sale and he has grown into a magnificent young sire. Bronc has a very balanced ebv graph for calving ease, growth, carcass, indexing and structure. A great allrounder!

A high selling bull from Lawson Angus in 2018, Momentous is described as 'an exceptional son of Momentum, an outstanding individual that excels in every part of the supply chain'. Very good structure with an outstanding carcass profile, with both EMA and IMF top 1% for the breed, which is the main reason Weeran Angus have invested in Momentous, as we believe EMA and IMF will set your cattle apart from the rest, in the eating quality & feedlot profitability. He has 3834 progeny across 86 herds.

Hooper has been such an outstanding sire in our herd for so many reasons. We just had to give a son some work as a yearling, who was then purchased by David and Caroline Fenton. Great calving ease, excellent scrotal and carcass traits, which are positive for the trifecta for fat being rib rump and the all important IMF.

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in Australia and "Happy Bidding"

-  1 Simply go to www.elitelivestockauctions.com.au using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the "Sign Up" page / link
-  3 Create a bidding profile using the bidder registration page.
(You can either register as a livestock agent, company or private buyer.)
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click "Register"
-  6 You will then be notified by email that an account has been created

-  7 Once an account has been created you are all "Set to Bid"
-  8 Each auction can then be viewed by clicking "Live Auction" logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click "Request to Bid"
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see "✓ Bid Request Approved"
-  11 On Sale day simply login, click "Enter Auction" on the catalogue page and you can start bidding.
(There is no need for software download)
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

1. UPON ARRIVAL:

- a) Ensure your new bulls socialise with a group of animals, (anything except other bulls) in the yards, when they arrive.
- b) Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd – see further information below).
 - i. **This MUST be done with the empty females, for a period of 2 to 4 weeks.** Ideally the bull can then be rested for 6-8 weeks prior to joining.
 - ii. **Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**
- c) Ideally bulls should be insured for their first year as standard.

2. PRE-JOINING:

- a) We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation, service ability testing and semen testing (essential in single sire matings). This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing infertile bulls from the joining group. If bulls are not service tested it is essential that you observe the bulls serve in the first week of joining.
 - i. These bulls will be given a risk rating and mating potential which will influence joining bull teams.
- b) **Keep vaccinations up to date;** Vibrovax, Leptospirosis 7-in-1, Pestigard and an annual drench, 4-6 weeks prior to joining.

3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a) **PROTECT a new bull by not over-joining, 30 females per virgin bull maximum.**
- b) **Recommended to multi-sire join.**
 - i. Ideally mixing bulls of different age groups, experience levels and risk ratings.
- c) **It is recommended, IF single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**

“Most new bull fertility issues develop or are acquired during the joining period, rather than being pre-existing problems.” This means that bull observation during the joining period is essential!

ONCE THE JOINING PROGRAM IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP.

Your new bulls need to be run in mobs that are easily monitored, keep them close to promote observation, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This involves looking for,

1. The bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately. Sound bulls should serve every 1 to 2 mounts.
2. Lameness.
3. Evidence of penile or preputial swelling or inflammation.
4. Signs of ill health, lethargy, etc.
5. Estimate the number of females cycling, (for every 20 females, one cycles each day at the commencement of joining). After three weeks of joining, there should only be one cow cycling every three days in 20 females.

4. POST-JOINING:

- a. **Annual breeding soundness evaluation is a non-negotiable procedure.**
 - b. Good management of bulls is a year-round procedure.
 - i. Keep bulls in working body condition – they should be in body condition score 3/5 at the start of mating, which will involve removing weight following the joining period.
 - ii. Manage bulls in groups of joining teams to establish stable social hierarchies and minimise bull fighting.
- ✓ Bulls need to be removed from the cows at the same time, to help create their bull mobs. This will limit the number of potential injuries by reducing the number of bull interactions.
 - ✓ Bull paddock management is very important to minimise injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction. Paddocks will require co-grazing with sheep, or crash-grazing by other mobs to manage feed quality and quantity on offer for the bulls.
 - ✓ The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.
 - ✓ Early pregnancy testing is essential for good female management and detection of failures. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring again in the future.

PENILE INFECTIONS IN BULLS – “Balanoposthitis”:

Penile infections are a common disease in young bulls during their first joining season in any new herd. Mitigating the risk of this disease as outlined above is essential to reduce the number of breakdowns and optimise bull cost per calf.

These infections are caused by a range of bacterial, viral, and other organisms (“pathogens”). The genital form of infectious bovine rhinotracheitis (IBR; herpes virus) is commonly implicated. The issue is that any given property has its own population of reproductive tract pathogens and if the new bulls make their first contact with these pathogens at the time of high workload (such as joining) they are at a high risk of developing a penile injury.

These injuries typically involve a reddened inflamed penis, developing to ulceration and pustules. Some bulls will stop serving due to pain (will continue to mount, but not serve), but other high libido bulls will continue to serve and create significant inflammation commonly leading to preputial tears, abscesses and prolapses. These are often perceived to be a “broken penis”, and **IF treated promptly may regain normal function!**

Treatment involves prompt removal of the affected bull from the joining mob, sexual rest (typically for the remainder of the joining) and treatment with antibiotics and anti-inflammatories. Preputial prolapses require surgical reduction.

If undetected these injuries commonly cause a significant decrease in pregnancy rate and commonly result in permanent infertility in the bull. **Observation and intervention are essential!**

Prevention of this condition is best achieved as outlined above, by deliberate pre-exposure of new bulls to a small number of females (low workload) well before the joining so that they are exposed and can develop immunity to the herds’ pathogens prior to the high workload of the joining period.

Positive fertility outcomes are a significant driver of profitability in beef breeding enterprises, but this requires informed and active management!

HVC Production & Breeding.

An excellent son of Momentous to kick start the Spring sale. Very good calving ease and excellent carcass with IMF in the top 3% and EMA in the top 8% for the breed. A very strong back line, large frame, good depth of body and muscle shape. Dam L238 is a daughter of NZ TeMania 11 465, and has produced two sale quality male calves. A top grader of 7 from Dick Whale for Genetic Type Summary grading, with a very nice phenotype. Used at Weeran!

The first of the run of the Lawson Blue Bagger sons. Blue Bagger was used in the Weeran program to lift carcass and calving ease and he has done that in bucket loads, teamed with his excellent growth data. R249 has a great phenotype with extreme calving ease all in the top 8%, with very good carcass and fertility. 8 ebv's are in the top 10% and all indexes, bar one, in the top 10%. Dam VHWK526 has three daughters performing in the Weeran Herd. This is a herd improver in every way. A good GTS grade of 6 from Dick. Used at Weeran!

There continues to be such a buzz in the industry about Beast Mode, and the sons we are offering in this spring sale are well worth buzzing about. This is the first and R247 is a beautifully structured Herdbook registered bull with a GTS grade of 7. Super duper quiet, excellent calving ease, very strong top and backline, with plenty of capacity. A medium frame but plenty to go with it. The Coolana Vicky line has great breeding behind it and with three females from her in the herd, we are thrilled with the progeny. Used at Weeran!

Our second Beast Mode son and Ramsay just oozes power! He is a big heavy son of Beast Mode who is heavily muscled with extreme indexing all in the top 6% for the breed. He is a good example of Beast Mode out of a very well proven Coolana Eldorene Erica female, VCCK178, who has had two male calves reaching sale quality. A high grader with a 6 and definitely a lead bull phenotypically. Herdbook registered. Used at Weeran!

R488 is described by Alec as 'a Mountain of Beef! That basically sums him up. Big frame, deep bodied and powerful! Our third Beast Mode son and what a beef machine he is. A very nice profile with calving ease, growth, fertility and net feed efficient! Fabulous indexing! He is dead dog quiet and one of the heavier bulls in the sale. Used at Weeran!

Witherswood Bronc was 8 weeks old when we spotted him at the Witherswood Angus dispersal sale, and he has grown into a magnificent young sire. Bronc has a very balanced ebv graph for calving ease, growth, carcass, indexing and structure. R282 follows the same path with a very well balanced data profile, along with EMA and IMF both in the top 18%. He has good muscle shape and is a soft easy doing Bronc son who is so quiet. R282 is a Grandson of our well proven donor Weeran Pride D506, and his dam is a first calf heifer by TeMania Garth. Herdbook registered. Used at Weeran!

A fantastic gts grade of 7 for this Weeran Norseman N348 son out of a first calf heifer P404. Teamed with Paringa Judd on the dam side to produce a deep long bodied bull, with excellent feet and leg structure, with calving ease and growth. Very good IMF and Carcase Weight and excellent fertility and feed efficient.

Buyer Price \$

Millah Murrah on both sides of the pedigree here, with P80 being a Millah Murrah embryo we kept, along with the dam being by Millah Murrah Mackinnon, an embryo we bred. P496 is a first calf heifer, and one of many heifers who have bred magnificent sons who have made our bull sale team. Good calving ease, and growth ebv's for Weeran Reflex all in the top 17%. Feed efficient, very good carcass weight and excellent indexing.

The well known and proven Weeran Hooper is the grand sire of R715, so therefore fantastic calving ease in this grandson....top 1% birthweight, top 7% Calving Ease Direct and top 14% Calving Ease Daughters. You will sleep well at night with this one. He is extremely quiet, and with a medium frame, ideal for heifer matings.

The first of the 16/17month old bulls being offered in this sale. The grand dam of S087 was a very successful donor with 20 progeny through the Weeran program. Q100 is a first calf heifer who has bred a very nice young bull in S87. He will grow into a big bull and already has a nice muscle pattern. A good growth curve with excellent EMA. A very nice temperament and easy doing young bull. He is super feed efficient. Herdbook registered.

Canadian Mogck Enrich semen was awarded to Alec at a DNA conference in Wagga by Dick Whale, having travelled the furthest for the conference, apart from the guest speaker of course who travelled from USA. A Sydgen Enhance son giving us a nice line of Mogck Enrich young 18 month old bulls to offer in this sale. This is the first. He displays a strong backline, with a larger frame and walks out well. He is in the top 6% for scrotal with a scrotal measurement of 41cm, being the largest in the S drop. A Herdbook son, with positive fat and a nice growth curve, out of a Gar Scale House heifer.
