WELCOME TO WEERAN ANGUS

Dear Cattle Breeders

The weaner sales are over and the Hamilton district sold in excess 20,000 weaners, with buyers travelling from all over Australia. True testament to the quality of cattle bred in this district . . . the best cattle in Australia! Weeran Angus were delighted to see many clients represented in the sales with outstanding results.

Opportunity abounds to maintain the genetic improvement in the Western Victorian herds with Weeran Angus allotting the strongest line up of performance bulls we have offered to date. With 950 cows, our selection pressure is extreme, therefore the quality of this entire draft is outstanding.

The Weeran program is a mature program, which has stood the test of time with this autumn sale being our 50th on property sale! Quite an achievement!

We are extremely proud of the bulls we are offering for phenotype, performance and docility. At Weeran Angus performance is fact not fiction!

You will also note many of our donors are represented in this sale with their progeny. It's been a great opportunity to use these donors to bring in other genetic families into our growing HBR herd.

Our bull sale will be held on property and online with Elite Livestock Auctions. All bulls will be on display and our auction will be run by video in our Woolshed beside the display yards.

We invite you to come and inspect the bulls at the Beef Week Field Day on Friday 3rd February and attend our 50th On Property Bull Sale on Tuesday 28th February @ 1pm.

Kind regards
Alec & Jo Moore

HEIFER BULL SELECTION CRITERIA

Heifer bull recommendations are the combination of Calving Ease EBV's, Birthweight EBV, pedigree history and actual birthweight, which gives us confidence to recommend them for heifer matings!

It is not an exact science, but a recommendation!

DELIVERY

Weeran will organise delivery of your purchases free of charge up to 150kms. Over and above this by negotiation.

ALL SALE BULLS COMPREHENSIVELY GENOMICALLY TESTED

HEALTH STATUS FOR ALL SALE BULLS

1. Semen Quality Tested

2. Drenched and 7 in 1 Vaccination

3. One Pestigard Vaccination and One Vibrovax Vaccination to all Sale Bulls

SEMEN RIGHTS

Weeran retains semen rights on all sale bulls for use in our Weeran Herd. If required, Weeran will organise and collect semen at our expense and at your convenience.

GENETIC CONDITIONS

All sale bulls have been tested for known genetic conditions, and results are printed in the catalogue. For further information, please refer to Angus Australia website... www.angusaustralia.com.au

COMPREHENSIVE GUARANTEE & SUPPLEMENTARY CATALOGUE INFORMATION

IF YOU EXPERIENCE ANY PROBLEMS, PLEASE MAKE SURE WE ARE THE FIRST CONTACT TO ENSURE WE CAN HELP YOU!

Visit www.weeranangus.com.au for full details

IBMS GTS GRADING

IBMS GENETIC TYPE SUMMARY (GTS)

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in the catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

DESCRIPTIVE TRAITS

Stature - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

Capacity - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

Body Length - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. **Muscle** - Scores higher than 25 indicate above average muscle.

Doing Ability - Ability to lay fat relative to their peers under common management system.

Muscle Score - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores : 25 = C muscle 30 = C+ 35 = B- 40 = B 45 = B+

Sheath - To maximize a bulls effective servicing of cows the sheath needs to be 'tight' and parallel with the underline. The navel must not be too expressive. Scores: 5 = Excellent: very tight, parallel with underline, very little navel.

4 = Very Good: tight, almost parallel with underline, slight navel.

3 = Acceptable: not so tight, angle increasing, some navel.

2 = Undesirable: pendulous, increased angle, navel very evident.

1 = Very Undesirable: very pendulous, too much angle, too much navel.

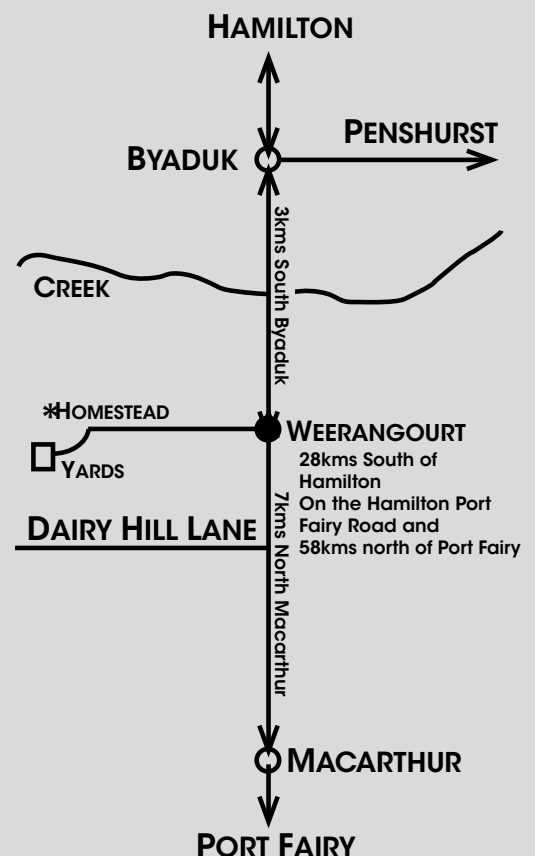

STRUCTURAL SOUNDNESS TRAITS

The system is aimed at being as simple as possible. All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 5 is optimum. Scores of 4 or 6 represent a slight variation from ideal.

These animals would be acceptable in most breeding programs. Scores of 3 and 7 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 2 or 8 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Many thanks to Dick Whale for assessing all sale bulls. WEERAN GUARANTEES!

OVERALL GRADE - 7 excellent, 6 very good, 5 good, 4 average, 3 and below are not acceptable to be in sale.

A Kirby son which we used by ET and AI. His progeny have excellent body shape with a very soft easy doing carcass. Excellent feet and leg structure and puppy dog quiet. In my opinion, the stand out reason for breeding angus cattle is carcass quality added to outstanding maternal & calving ease traits. This sire line delivers in spades. He has been used in 2 herds with 60 progeny.

Lawsons Momentous M518 is very well proven for dramatically improving eye muscle area and IMF. It is fact not fiction. He is also a feet structure improver and his progeny are puppy dog quiet. Q85 adds more calving ease plus body shape and capacity. We are very pleased with his progeny and we are using him heavily. There is a lot to like about this sire. He has been used in 1 herd with 160 progeny.

Sydgen Enhance is an outstanding bull combining calving ease and low birth with a very powerful 200, 400 and 600 day growth! He is top 9% or better for all growth ebv's. He is extremely high for docility at top 2% with top 1% net feed efficiency. Packing into that growth curve is a top 13% carcass weight, saddled with a very good carcass profile. A very sound, and phenotypically very attractive bull. His sons have sold very successfully at Weeran, topping our sales and constantly in the lead group of sale bulls. 93 herds have used Enhance with 2,446 progeny.

The Witherswood Dispersal sale in 2018 gave the industry access to some top genetics from the very passionate breeding program of John and Joan Woodruff, and Ian Peake. We have been delighted with the donors selected to join our program and to now see one of our donors progeny now in our reference sire list, Witherswood Bronc! This is the second line of progeny to be sold by Bronc, with many more to come through the program. He was 8 weeks old when we spotted him at the dispersal sale and he has grown into a magnificent young sire. Bronc has a very balanced ebv graph for calving ease, growth, carcass, indexing and structure. A great allrounder! He has been used in 1 herd with 159 progeny.

F1023 was discovered by the Angus Benchmarking trial as an elite carcass sire. It is for this reason I chose to bring him into our herd to inject this elite carcass profile into our herd, and in particular, with our outstanding Hooper and Joel female lines. It is my opinion that many good breeding decisions are like a game of chess with a number of planned moves made in advance. Calving ease and feet structure are also his strong suit. A very interesting sire.

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in Australia and "Happy Bidding"

-  1 Simply go to www.elitelivestockauctions.com.au using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the "Sign Up" page / link
-  3 Create a bidding profile using the bidder registration page.
(You can either register as a livestock agent, company or private buyer.)
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click "Register"
-  6 You will then be notified by email that an account has been created

-  7 Once an account has been created you are all "Set to Bid"
-  8 Each auction can then be viewed by clicking "Live Auction" logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click "Request to Bid"
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see "✓ Bid Request Approved"
-  11 On Sale day simply login, click "Enter Auction" on the catalogue page and you can start bidding.
(There is no need for software download)
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

Having trouble registering and logging in?
Contact Elite Livestock Auctions
1300 15 31 35

1. UPON ARRIVAL:

- a) Ensure your new bulls socialise with a group of animals, (anything except other bulls) in the yards, when they arrive.
- b) Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd – see further information below).
 - i. **This MUST be done with the empty females, for a period of 2 to 4 weeks.** Ideally the bull can then be rested for 6-8 weeks prior to joining.
 - ii. **Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**
- c) Ideally bulls should be insured for their first year as standard.

2. PRE-JOINING:

- a) We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation, service ability testing and semen testing (essential in single sire matings). This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing infertile bulls from the joining group. If bulls are not service tested it is essential that you observe the bulls serve in the first week of joining.
 - i. These bulls will be given a risk rating and mating potential which will influence joining bull teams.
- b) **Keep vaccinations up to date;** Vibrovax, Leptospirosis 7-in-1, Pestigard and an annual drench, 4-6 weeks prior to joining.

3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a) **PROTECT a new bull by not over-joining, 30 females per virgin bull maximum.**
- b) **Recommended to multi-sire join.**
 - i. Ideally mixing bulls of different age groups, experience levels and risk ratings.
- c) **It is recommended, IF single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**

“Most new bull fertility issues develop or are acquired during the joining period, rather than being pre-existing problems.” This means that bull observation during the joining period is essential!

ONCE THE JOINING PROGRAM IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP.

Your new bulls need to be run in mobs that are easily monitored, keep them close to promote observation, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This involves looking for,

1. The bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately. Sound bulls should serve every 1 to 2 mounts.
2. Lameness.
3. Evidence of penile or preputial swelling or inflammation.
4. Signs of ill health, lethargy, etc.
5. Estimate the number of females cycling, (for every 20 females, one cycles each day at the commencement of joining). After three weeks of joining, there should only be one cow cycling every three days in 20 females.

4. POST-JOINING:

- a. **Annual breeding soundness evaluation is a non-negotiable procedure.**
 - b. Good management of bulls is a year-round procedure.
 - i. Keep bulls in working body condition – they should be in body condition score 3/5 at the start of mating, which will involve removing weight following the joining period.
 - ii. Manage bulls in groups of joining teams to establish stable social hierarchies and minimise bull fighting.
- ✓ Bulls need to be removed from the cows at the same time, to help create their bull mobs. This will limit the number of potential injuries by reducing the number of bull interactions.
 - ✓ Bull paddock management is very important to minimise injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction. Paddocks will require co-grazing with sheep, or crash-grazing by other mobs to manage feed quality and quantity on offer for the bulls.
 - ✓ The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.
 - ✓ Early pregnancy testing is essential for good female management and detection of failures. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring again in the future.

PENILE INFECTIONS IN BULLS – “Balanoposthitis”:

Penile infections are a common disease in young bulls during their first joining season in any new herd. Mitigating the risk of this disease as outlined above is essential to reduce the number of breakdowns and optimise bull cost per calf.

These infections are caused by a range of bacterial, viral, and other organisms (“pathogens”). The genital form of infectious bovine rhinotracheitis (IBR; herpes virus) is commonly implicated. The issue is that any given property has its own population of reproductive tract pathogens and if the new bulls make their first contact with these pathogens at the time of high workload (such as joining) they are at a high risk of developing a penile injury.

These injuries typically involve a reddened inflamed penis, developing to ulceration and pustules. Some bulls will stop serving due to pain (will continue to mount, but not serve), but other high libido bulls will continue to serve and create significant inflammation commonly leading to preputial tears, abscesses and prolapses. These are often perceived to be a “broken penis”, and **IF treated promptly may regain normal function!**

Treatment involves prompt removal of the affected bull from the joining mob, sexual rest (typically for the remainder of the joining) and treatment with antibiotics and anti-inflammatories. Preputial prolapses require surgical reduction.

If undetected these injuries commonly cause a significant decrease in pregnancy rate and commonly result in permanent infertility in the bull. **Observation and intervention are essential!**

Prevention of this condition is best achieved as outlined above, by deliberate pre-exposure of new bulls to a small number of females (low workload) well before the joining so that they are exposed and can develop immunity to the herds’ pathogens prior to the high workload of the joining period.

Positive fertility outcomes are a significant driver of profitability in beef breeding enterprises, but this requires informed and active management!

HVC Production & Breeding.

To kick off the sale, we have a top HBR son of Chiltern Park Moe, out of a Millah Murrah Loch Up daughter and the very well known Millah Murrah Prue family. He ticks so many boxes . . .excellent calving ease, growth, milk, docility, carcass weight, IMF, structure and indexing! 12 ebv's in the top 15% for the breed!! Wow! A raw scan of 5.9 for IMF. He is a big frame bull with good body length and plenty of capacity. Very quiet and a top grader of 7 by Dick on the gts grading system. Dam P107 has performed well in her young age with her other male calf selling very well last year in the autumn sale. USED AT WEERAN!

Baldrige Compass and Boonaroo Gravity have combined to produce a calving ease bull with a medium frame, good growth, a very sleek skin and good capacity and structure. Very good docility which is so important and something Weeran works very hard to achieve across the herd. A twin at birth, who has done very well to get to sale quality. USED AT WEERAN!

S162 is the first of the Enhance/Wattletop Barunah embryos, and they are a very impressive run. Enhance has worked beautifully at Weeran with many progeny topping the sales. We have 47 progeny out of NWPM157 and as each one hits the ground we are excited! A medium frame with good skin and body capacity and well muscled. Beautiful temperament which both Enhance and Barunah have in bucket loads. Calving ease, growth, milk, fertility, feed efficient, great structure and carcass - there is a lot to like about him. USED AT WEERAN!

Buyer Price \$

The second run of our Witherswood Bronc sons for sale. Bronc is delivering well for the Weeran program. S233 has Witherswood, Anvil and Weeran Lucy in the pedigree tree, producing a moderate frame son with terrific body length. Very good muscle pattern, soft easy doing and excellent forward of the shoulder and structurally correct. Great performance profile with calving ease and excellent growth, carcass weight and very feed efficient. 7 out of 10 indexes are in top 10% for the breed.

Get a load of those cannon balls . . . biggest in the catalogue at 44cm!!! Ascot Hallmark and Barwidgee JayW together have produced a long bodied bull with good shape. He has beautiful skin and excellent muscle pattern. His capacity is massive with a very good phenotype. Massive growth with excellent structure with a score of 7! This is one of the two bulls that have not had their genomics loaded, but they should be through at the end of January.

S170 is an absolute power house backed with one percenters. Compass and Witherswood Wilcoola have packed the power into this one with all three growth ebv's top 1%, milk and feed efficiency and carcass weight also top 1%. Dead dog quiet, with a medium frame and plenty of body length. Very good capacity, feet structure good with an overall grade of 6. L0186 has been a very successful donor with 22 progeny, and S170 being her natural calf.

Weeran Sundance was heavily used at Weeran as a yearling. Fabulous performance profile with calving ease, growth, docility, carcass, positive fat and indexing. Great growth curve with 2.6 to 126. An actual birthweight of 35kgs and used over heifers. Witherswood K1116 has many runs on the board with 38 progeny through the program.

One of the first Spring drop calves to arrive, being a Joel first calf heifers son by Momentum. S276 has a moderate frame, heavily muscled and super quiet. He has good capacity with a good strong back line. Outstanding calving ease with all four traits in the top 5% for the breed, and team this with awesome EMA in top 5% and good IMF.
