WELCOME TO WEERAN ANGUS

Dear Cattle Breeders,

Firstly thank you for your ongoing support to the Moore family, the Weeran Team and the Weeran Program. We are very proud to have ticked off 50 bull sales, and excited to be offering another line of quality bulls for our 51st sale.

We would like to thank Leah Drendel and Jack Dowell for their fantastic commitment and passion for helping us breed the very best genetics for our clients. Their work ethic, enthusiasm for Seedstock, and their energy is fantastic.

We look forward to showing you our lineup of bulls from industry leading reference sires. These sires are giving us elite carcass values, excellent growth and fertility with calving ease. With this

our bulls have excellent temperament which is something we continually strive for.

Our bull sale will be held on property and online with Elite Livestock Auctions. All bulls will be on display and our auction will be run by video in our Woolshed beside the display yards.

We invite you to come and inspect the bulls at the Inspection day on Tuesday 29th August between 10am and 4pm, and to attend our 51st On Property Bull Sale on Tuesday 5th September @ 1pm.

We look forward to welcoming you to Weeran Angus.

Kind regards
Alec & Jo Moore

HEIFER BULL SELECTION CRITERIA

Heifer bull recommendations are the combination of Calving Ease EBV's, Birthweight EBV, pedigree history and actual birthweight, which gives me confidence to recommend them for heifer matings!

It is not an exact science, but a recommendation!

DELIVERY REBATE

WE ARE MAKING CHANGES TO THE DELIVERY OF ALL SALE BULLS!

We would like to offer all purchasers a rebate of \$100 per bull to organise pick up of their own bulls. For those who don't organise their own transport, there will be a charge of \$100 per bull up to 500 kms, for transport to be organised. It is our intention that all bulls will be delivered within a week.

We will organise loads to the same districts to make it cost effective.

ALL SALE BULLS COMPREHENSIVELY GENOMICALLY TESTED

HEALTH STATUS FOR ALL SALE BULLS

1. Semen Quality Tested
2. Drenched and 7 in 1 Vaccination
3. One Pestigard Vaccination and One Vibrovax Vaccination to all Sale Bulls
4. Two Vaccinations – Bovilis MH + IBR

SEMEN RIGHTS

Weeran retains semen rights on all sale bulls for use in our Weeran Herd. If required, Weeran will organise and collect semen at our expense and at your convenience.

GENETIC CONDITIONS

All sale bulls have been tested for known genetic conditions, and results are printed in the catalogue. For further information, please refer to Angus Australia website...
www.angusaustralia.com.au

IBMS GTS GRADING

IBMS GENETIC TYPE SUMMARY (GTS)

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in the catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

DESCRIPTIVE TRAITS

Stature - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

Capacity - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

Body Length - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. Muscle - Scores higher than 25 indicate above average muscle.

Doing Ability - Ability to lay fat relative to their peers under common management system.

Muscle Score - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores : 25 = C muscle 30 = C+ 35 = B- 40 = B 45 = B+

Sheath - To maximize a bulls effective servicing of cows the sheath needs to be 'tight' and parallel with the underline. The navel must not be too expressive. Scores: 5 = Excellent: very tight, parallel with underline, very little navel.

4 = Very Good: tight, almost parallel with underline, slight navel.

3 = Acceptable: not so tight, angle increasing, some navel.

2 = Undesirable: pendulous, increased angle, navel very evident.

1 = Very Undesirable: very pendulous, too much angle, too much navel.

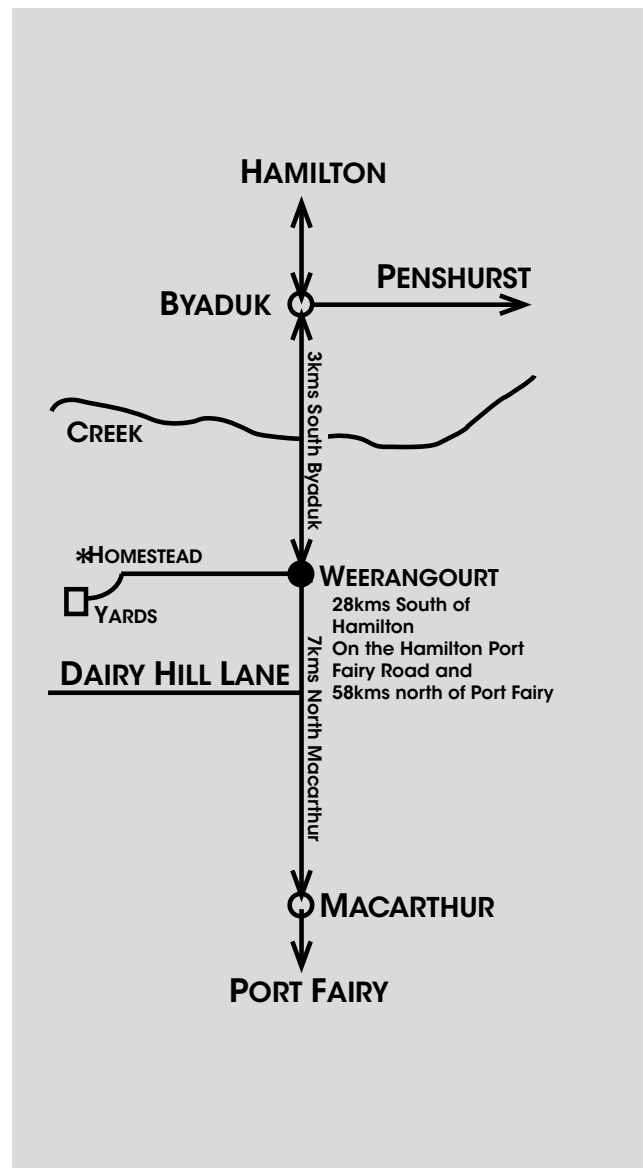

STRUCTURAL SOUNDNESS TRAITS

The system is aimed at being as simple as possible. All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 5 is optimum. Scores of 4 or 6 represent a slight variation from ideal.

These animals would be acceptable in most breeding programs. Scores of 3 and 7 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 2 or 8 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Many thanks to Dick Whale for assessing all sale bulls. WEERAN GUARANTEES!

OVERALL GRADE - 7 excellent, 6 very good, 5 good, 4 average, 3 and below are not acceptable to be in sale.

Lawsons Momentous M518 is very well proven for dramatically improving eye muscle area and IMF you can put that in the bank it is fact not fiction. Q85 adds more calving ease plus body shape and capacity. We are very pleased with his progeny and we are using him heavily. There is a lot to like about this sire. He is a top walking sire at Weeran Angus and we are excited with his progeny.

Quarterback is a bull which caught the eye of a great number of people in the industry for his outstanding phenotype and performance profile. His performance profile is extremely well balanced with only NFI-F and RBY needing adjustment. If you need to advance carcass quality and calving ease then Quarterback will tick the box. He has been used in 124 herds with 2,433 progeny.

A high selling bull from Lawson Angus in 2018. Very good structure with an outstanding carcass profile, which is the main reason Weeran Angus have invested in Momentous, as we believe EMA and IMF will set your cattle apart from the rest! in the eating quality & feedlot profitability. He has been used in 115 herds with 4,324 progeny.

Bronc is ticking so many boxes in our program and sired the top priced bull at the 2023 Autumn Bull Sale this year! The Witherswood Dispersal sale in 2018 gave the industry access to some top genetics from the very passionate breeding program of John and Joan Woodruff, and Ian Peake. We have been delighted with the donors selected to join our program and to see one of our donors progeny in our reference sire list, Witherswood Bronc! He was 8 weeks old when we spotted him at the dispersal sale and he has grown into a magnificent young sire. Bronc has a very balanced ebv graph for calving ease, growth, carcass, indexing and structure. A great allrounder! He has 159 progeny in the Weeran herd.

Sydney Enhance is an outstanding bull combining calving ease and low birth with a very powerful 200, 400 and 600 day growth! He is top 9% or better for all growth ebv's. He is extremely high for docility at top 2% with top 1% net feed efficiency. Packing into that growth curve is a top 13% carcass weight, saddled with a very good carcass profile. A very sound, and phenotypically very attractive, bull. We have had great success with Enhance with many of his progeny being in the top performers of our bull sales. 137 Herds have used Enhance with 3,204 progeny.

Quest is a pure Millah Murrah pedigree purchased as an embryo. He is a large framed bull with excellent temperament and structure. His mother is a half sister to the \$190,000 dollar female sold in the Millah Murrah female reduction sale in 19/10/2017. Purchased by Nareen Station.

**ADDITIONAL REFERENCE SIRE INFORMATION CAN BE FOUND ON
WWW.ANGUSAUSTRALIA.COM.AU**

1. UPON ARRIVAL:

- a) Ensure your new bulls socialise with a group of animals, (anything except other bulls) in the yards, when they arrive.
- b) Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd – see further information below).
 - i. **This MUST be done with the empty females, for a period of 2 to 4 weeks.** Ideally the bull can then be rested for 6-8 weeks prior to joining.
 - ii. **Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**
- c) Ideally bulls should be insured for their first year as standard.

2. PRE-JOINING:

- a) We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation, service ability testing and semen testing (essential in single sire matings). This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing infertile bulls from the joining group. If bulls are not service tested it is essential that you observe the bulls serve in the first week of joining.
 - i. These bulls will be given a risk rating and mating potential which will influence joining bull teams.
- b) **Keep vaccinations up to date;** Vibrovax, Leptospirosis 7-in-1, Pestigard and an annual drench, 4-6 weeks prior to joining.

3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a) **PROTECT a new bull by not over-joining, 30 females per virgin bull maximum.**
- b) **Recommended to multi-sire join.**
 - i. Ideally mixing bulls of different age groups, experience levels and risk ratings.
- c) **It is recommended, IF single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**

“Most new bull fertility issues develop or are acquired during the joining period, rather than being pre-existing problems.” This means that bull observation during the joining period is essential!

ONCE THE JOINING PROGRAM IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP.

Your new bulls need to be run in mobs that are easily monitored, keep them close to promote observation, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This involves looking for,

1. The bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately. Sound bulls should serve every 1 to 2 mounts.
2. Lameness.
3. Evidence of penile or preputial swelling or inflammation.
4. Signs of ill health, lethargy, etc.
5. Estimate the number of females cycling, (for every 20 females, one cycles each day at the commencement of joining). After three weeks of joining, there should only be one cow cycling every three days in 20 females.

4. POST-JOINING:

- a. **Annual breeding soundness evaluation is a non-negotiable procedure.**
 - b. Good management of bulls is a year-round procedure.
 - i. Keep bulls in working body condition – they should be in body condition score 3/5 at the start of mating, which will involve removing weight following the joining period.
 - ii. Manage bulls in groups of joining teams to establish stable social hierarchies and minimise bull fighting.
- ✓ Bulls need to be removed from the cows at the same time, to help create their bull mobs. This will limit the number of potential injuries by reducing the number of bull interactions.
 - ✓ Bull paddock management is very important to minimise injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction. Paddocks will require co-grazing with sheep, or crash-grazing by other mobs to manage feed quality and quantity on offer for the bulls.
 - ✓ The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.
 - ✓ Early pregnancy testing is essential for good female management and detection of failures. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring again in the future.

PENILE INFECTIONS IN BULLS – “Balanoposthitis”:

Penile infections are a common disease in young bulls during their first joining season in any new herd. Mitigating the risk of this disease as outlined above is essential to reduce the number of breakdowns and optimise bull cost per calf.

These infections are caused by a range of bacterial, viral, and other organisms (“pathogens”). The genital form of infectious bovine rhinotracheitis (IBR; herpes virus) is commonly implicated. The issue is that any given property has its own population of reproductive tract pathogens and if the new bulls make their first contact with these pathogens at the time of high workload (such as joining) they are at a high risk of developing a penile injury.

These injuries typically involve a reddened inflamed penis, developing to ulceration and pustules. Some bulls will stop serving due to pain (will continue to mount, but not serve), but other high libido bulls will continue to serve and create significant inflammation commonly leading to preputial tears, abscesses and prolapses. These are often perceived to be a “broken penis”, and **IF treated promptly may regain normal function!**

Treatment involves prompt removal of the affected bull from the joining mob, sexual rest (typically for the remainder of the joining) and treatment with antibiotics and anti-inflammatories. Preputial prolapses require surgical reduction.

If undetected these injuries commonly cause a significant decrease in pregnancy rate and commonly result in permanent infertility in the bull. **Observation and intervention are essential!**

Prevention of this condition is best achieved as outlined above, by deliberate pre-exposure of new bulls to a small number of females (low workload) well before the joining so that they are exposed and can develop immunity to the herds’ pathogens prior to the high workload of the joining period.

Positive fertility outcomes are a significant driver of profitability in beef breeding enterprises, but this requires informed and active management!

HVC Production & Breeding.

ANGUS AUSTRALIA EBV'S

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
Days to Calving	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASS			
Carcass Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
FEED EFFICIENCY			
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Simply go to www.elitelivestockauctions.com.au using your desktop, laptop, iPad, iPhone or android device.

Click on the **"Sign Up"** page / link

Create a bidding profile using the bidder registration page.
(You can either register as a livestock agent, company or private buyer)

Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue

Click **"Register"**

You will then be notified by email that an account has been created.

Once an account has been created you are all **"Set to Bid"**

Each Auction can then be viewed by clicking **"Live Auction"** logo on the Elite Livestock Auctions website.

Once you receive email notification that your account has been created please go to the sale you wish to bid at and click **"Request to Bid"**

The sale will then approve your application to bid and on the sale catalogue you will see **"✓ Bid Request Approved"**

On Sale day simply login, click **"Enter Auction"** on the catalogue page and you can start bidding.
(There is no need for software download)

At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

A very impressive pedigree tree here with Millah Murrah, TeMania, Strathewen and Weeran - no wonder he's a ripper! Calving ease with fantastic growth, terrific capacity and a very good muscle pattern. Huge nuts at 44cm and SS ebv in top 7% for the breed. He is very quiet, and definitely one of our favourites!

Wow is the comment from Alec when S389 walked through the yards. A good strong backline, strong loin and easy doing. Huge nuts at 43cm! Going back to the Wattletop Barunah cow family, and grand dam M157 purchased at the Wattletop dispersal sale and has produced 47 progeny including 15 bulls through our sale ring!

We used Screwdriver at Weeran over cows, and he exhibits good natural muscularity which is also expressed in his EBV for +12 for EMA. Exceptional structure scores in the top 4 and 6 percentile and moves like a cat. High yielding with his RBY in the top 3% for the breed. Excellent indexing. Came out of the cows on 2/8/23 and videoed in his working gear. USED AT WEERAN

Weeran Significant was used in the Weeran program and was selected for his outstanding Calving Ease Direct along with this Calving Ease Daughters. He is a grandson of Wattletop Kiwi who could pass a refrigerator!! You are getting excellent calving ease in both areas. A Positive fat carcass with high IMF. We used him on our heifers which should give you confidence to use him extensively. He has been videoed straight out of the heifers in his working gear. Came out of the heifers on 2/8/23. USED AT WEERAN

Another son from the Coolana Annabell family. We have really enjoyed introducing new cow families to add into the Weeran program from very high profile dispersal sales. From the three males dam VCCJ192 has produced two that have already gone through the bull sale ring! S313 has very good growth ebv's with a massive EMA being in the top 2% of the breed and high yielding with RBV in the top 5%.

Jay W needs no introduction, and many of you will know Barwidgee Jay W's history. He has been a fantastic sire in our program, named after John Kelly who purchased one of our first sale bulls, and we have many females by him in the Weeran herd. We have had 66 sale bulls through the ring, and this is his last! His progeny have topped many of the Weeran sales. Jay W was lucky to be given a couple of cows in 2021 and here he goes . . bam . . . another sale bull who has calving ease and structure.

A combination of Moe and Wattletop Franklin producing a moderate frame son who is very well muscled with good feet. Excellent growth with all ebv's in the top 10% for the breed, good maternal traits, feed efficient and awesome EMA in the top 2% of the breed. High yielding with RBY in the top 1%. Very high indexing across the board.

A very nice EBV profile with this son of Lawsons Q85 out of a grand daughter of one of our donors, Witherswood N0115, who has already produced top sale quality bulls. He is a smaller frame pocket rocket, with very good capacity & strong down the backline. Calving ease, growth, fantastic EMA and very good indexing. Pink eye scar.
