WELCOME TO WEERAN ANGUS

Dear Cattle Breeders

As we write this, the weaner sales are completed and the new year livestock selling markets have all responded positively to rain and renewed confidence!

The Beef Industry will continue to improve, as the worldwide shortage of red meat protein is a fact, with the American market demand outstripping supply.

In my opinion we should all prepare ourselves to take advantage of the upswing of the beef cycle. The down swing of the market was primarily caused by drought, and the fear of reliving the harsh 2018/19 season in the north.

52 sales coming up for the Weeran Angus Team! We are excited with a number of very impressive new reference sires in the program with their first progeny in this sale! With the new Neogen Igenity Genomic DNA test for the hard to measure traits, and important data in addition to the Breedplan ebv's, it is exciting to be able to select on more relevant market information for our breeding program. It has proven with 6,300 tests, that Igenity data correlates 90% accuracy. In particular interest is the tenderness, marbling and stayability results. Dick Whale is very involved in this new ground breaking genomic data, and it will be something we at Weeran Angus will be using to ensure we are producing a product that meets the current

market demand - an excellent eating experience, and females that will have longevity in your herd!

Our herd focus is unwavering . . . with a focus on calving ease and carcass with as much growth and maternal traits that we can make use of in our own environment. Adding outstanding temperament, goes a long way for increased production and work safety.

We always strive to have Sire Verified bulls which means they are 100% guaranteed to be the sire we say they are! To get this, extensive genomic testing is undertaken to make our data faultless!

There are a large number of HBR bulls in this catalogue going back to our Elite donor females which we are very excited about.

Our bull sale will be held on property and online with Stocklive Elite Auctions. All bulls will be on display and our auction will be run by video in our Woolshed beside the display yards.

We invite you to come and inspect the bulls at the Beef Week Field Day on Saturday 3rd February and attend our 52nd On Property Bull Sale on Tuesday 27th February @ 1pm.

Kind regards
Alec & Jo Moore

HEIFER BULL SELECTION CRITERIA

Heifer bull recommendations are the combination of Calving Ease EBV's, Birthweight EBV, pedigree history and actual birthweight, which gives us confidence to recommend them for heifer matings!

It is not an exact science, but a recommendation!

DELIVERY REBATE

WE ARE MAKING CHANGES TO THE DELIVERY OF ALL SALE BULLS!

We would like to offer all purchasers a rebate of \$100 per bull to organise pick up of their own bulls within two weeks. For those who don't organise their own transport, there will be a charge of \$100 per bull up to 500 kms, for transport to be organised. It is our intention that all bulls will be delivered within two weeks.

We will organise loads to the same districts to make it cost effective.

ALL SALE BULLS COMPREHENSIVELY GENOMICALLY TESTED

HEALTH STATUS FOR ALL SALE BULLS

1. Semen Quality Tested

3. Two Pestigard Vaccinations and Two Vibrovax Vaccinations to all Sale Bulls

4. Two Vaccinations - Bovilis MH + IBR

2. Drenched and 7 in 1 Vaccination

SEMEN RIGHTS

Weeran retains semen rights on all sale bulls for use in our Weeran Herd. If required, Weeran will organise and collect semen at our expense and at your convenience.

GENETIC CONDITIONS

All sale bulls have been tested for known genetic conditions, and results are printed in the catalogue. For further information, please refer to Angus Australia website...
www.angusaustralia.com.au

IBMS GTS GRADING

IBMS GENETIC TYPE SUMMARY (GTS)

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in the catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

DESCRIPTIVE TRAITS

Stature - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

Capacity - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

Body Length - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. Muscle - Scores higher than 25 indicate above average muscle.

Doing Ability - Ability to lay fat relative to their peers under common management system.

Muscle Score - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores : 25 = C muscle 30 = C+ 35 = B- 40 = B 45 = B+

Sheath - To maximize a bulls effective servicing of cows the sheath needs to be "tight" and parallel with the underline. The navel must not be too expressive.

Scores: 5 = Excellent: very tight, parallel with underline, very little navel.

4 = Very Good: tight, almost parallel with underline, slight navel.

3 = Acceptable: not so tight, angle increasing, some navel.

2 = Undesirable: pendulous, increased angle, navel very evident.

1 = Very Undesirable: very pendulous, too much angle, too much navel.

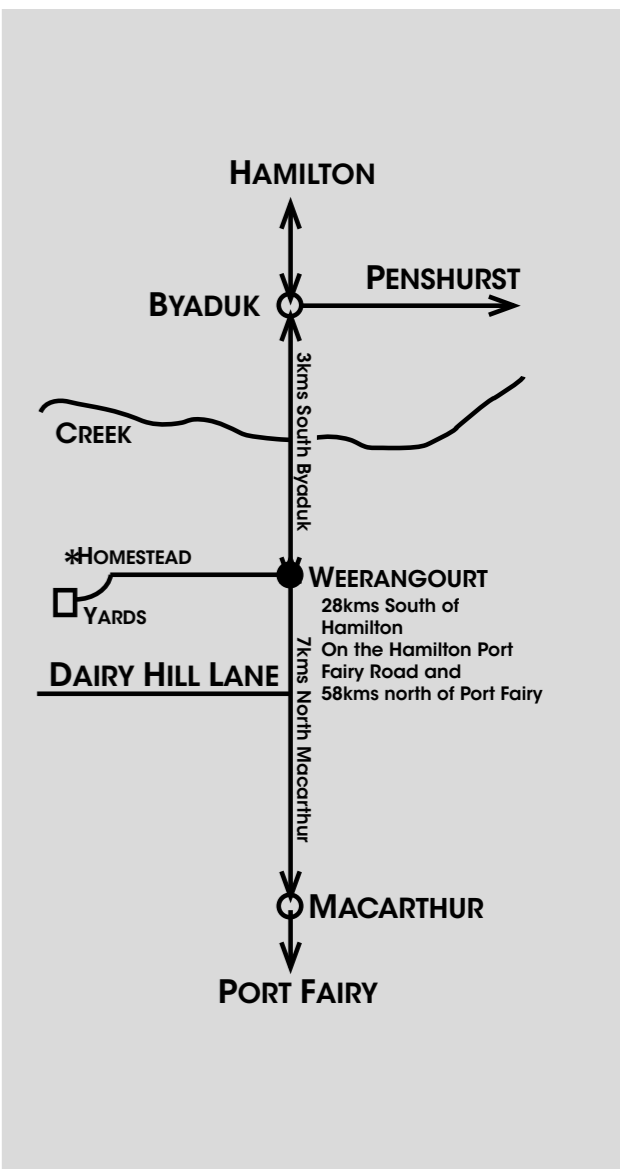

STRUCTURAL SOUNDNESS TRAITS

The system is aimed at being as simple as possible. All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 5 is optimum. Scores of 4 or 6 represent a slight variation from ideal.

These animals would be acceptable in most breeding programs. Scores of 3 and 7 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 2 or 8 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Many thanks to Dick Whale for assessing all sale bulls. WEERAN GUARANTEES!

OVERALL GRADE - 7 excellent, 6 very good, 5 good, 4 average, 3 and below are not acceptable to be in sale.

EBV		No of Sons in Sale		
		17		

Mainland was purchased in 2021 in syndication with Bull Oak Well & Mandayen Angus studs. He has an outstanding Phenotype with faultless structure, a real athlete. His data set is outstanding combining calving ease with a top 5% growth curve, top 2% scrotal, top 2% eye muscle and top 5% docility. Dick Whale has also had him tested genomically using the 10 trait ingenity beef profile system where he has excelled for Tenderness with a top score 10/10 along with very good results for Marbling and Carcase Weight. He has been used in 10 herds with 324 progeny.

EBV		No of Sons in Sale		
		12		

Lawsons Momentous M518 is very well proven for dramatically improving eye muscle area and IMF ...you can put that in the bank it is fact not fiction. He is also a feet structure improver and his progeny are puppy dog quiet. Q85 adds more calving ease plus body shape and capacity. We are very pleased with his progeny and we are using him heavily. There is a lot to like about this sire.

MYERS FAIR-N-SQUARE		Society ID	Reg. Status	Birth Date

EBV		No of Sons in Sale		
		10		

Myers Fair-N-Square was brought into the program to improve body shape and feed efficiency. He has produced cattle which are as thick as a Blue stone block and yield for carcase weight & retail beef yield which surpasses expectation. He also was tested using the ingenity genomic test and has excelled for Tenderness, Marbling, and Carcase Weight. He has been used in 57 herds with 422 progeny.

EBV		No of Sons in Sale		
		10		

Connamara P64 was selected for his outstanding data set and outcross pedigree which really packs a punch. He is an APR sire, so he will be hard to find in other HBR programs. For the commercial breeder he will give you a rare opportunity. His data is freakishly good for all traits and combined with our outstanding Joel and Hooper females we believe we have something very special. He has been used in 23 herds with 490 progeny.

EBV		No of Sons in Sale		
		5		

Quambatook was a high selling son of Numurkah purchased at Dunoon Angus in the spring of 2021. He combines our mantra of calving ease & carcase with exceptional phenotype. A large framed bull with excellent feet and leg structure combined with excellent docility. These are his first progeny which are grading very well and very consistently, which is giving us a lot of confidence in using him heavily in the future.

WWW.ANGUSAUSTRALIA.COM.AU

ALL EBV'S IN CATALOGUE ARE FROM END OF DECEMBER 2023 RUN!

1. UPON ARRIVAL:

- a) Ensure your new bulls socialise with a group of animals, (anything except other bulls) in the yards, when they arrive.
- b) Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd – see further information below).
 - i. **This MUST be done with the empty females, for a period of 2 to 4 weeks.** Ideally the bull can then be rested for 6-8 weeks prior to joining.
 - ii. **Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**
- c) Ideally bulls should be insured for their first year as standard.

2. PRE-JOINING:

- a) We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation, service ability testing and semen testing (essential in single sire matings). This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing infertile bulls from the joining group. If bulls are not service tested it is essential that you observe the bulls serve in the first week of joining.
 - i. These bulls will be given a risk rating and mating potential which will influence joining bull teams.
- b) **Keep vaccinations up to date;** Vibrovax, Leptospirosis 7-in-1, Pestigard and an annual drench, 4-6 weeks prior to joining.

3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a) **PROTECT a new bull by not over-joining, 30 females per virgin bull maximum.**
- b) **Recommended to multi-sire join.**
 - i. Ideally mixing bulls of different age groups, experience levels and risk ratings.
- c) **It is recommended, IF single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**

“Most new bull fertility issues develop or are acquired during the joining period, rather than being pre-existing problems.” This means that bull observation during the joining period is essential!

ONCE THE JOINING PROGRAM IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP.

Your new bulls need to be run in mobs that are easily monitored, keep them close to promote observation, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This involves looking for,

1. The bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately. Sound bulls should serve every 1 to 2 mounts.
2. Lameness.
3. Evidence of penile or preputial swelling or inflammation.
4. Signs of ill health, lethargy, etc.
5. Estimate the number of females cycling, (for every 20 females, one cycles each day at the commencement of joining). After three weeks of joining, there should only be one cow cycling every three days in 20 females.

4. POST-JOINING:

- a. **Annual breeding soundness evaluation is a non-negotiable procedure.**
 - b. Good management of bulls is a year-round procedure.
 - i. Keep bulls in working body condition – they should be in body condition score 3/5 at the start of mating, which will involve removing weight following the joining period.
 - ii. Manage bulls in groups of joining teams to establish stable social hierarchies and minimise bull fighting.
- ✓ Bulls need to be removed from the cows at the same time, to help create their bull mobs. This will limit the number of potential injuries by reducing the number of bull interactions.
 - ✓ Bull paddock management is very important to minimise injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction. Paddocks will require co-grazing with sheep, or crash-grazing by other mobs to manage feed quality and quantity on offer for the bulls.
 - ✓ The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.
 - ✓ Early pregnancy testing is essential for good female management and detection of failures. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring again in the future.

PENILE INFECTIONS IN BULLS – “Balanoposthitis”:

Penile infections are a common disease in young bulls during their first joining season in any new herd. Mitigating the risk of this disease as outlined above is essential to reduce the number of breakdowns and optimise bull cost per calf.

These infections are caused by a range of bacterial, viral, and other organisms (“pathogens”). The genital form of infectious bovine rhinotracheitis (IBR; herpes virus) is commonly implicated. The issue is that any given property has its own population of reproductive tract pathogens and if the new bulls make their first contact with these pathogens at the time of high workload (such as joining) they are at a high risk of developing a penile injury.

These injuries typically involve a reddened inflamed penis, developing to ulceration and pustules. Some bulls will stop serving due to pain (will continue to mount, but not serve), but other high libido bulls will continue to serve and create significant inflammation commonly leading to preputial tears, abscesses and prolapses. These are often perceived to be a “broken penis”, and **IF treated promptly may regain normal function!**

Treatment involves prompt removal of the affected bull from the joining mob, sexual rest (typically for the remainder of the joining) and treatment with antibiotics and anti-inflammatories. Preputial prolapses require surgical reduction.

If undetected these injuries commonly cause a significant decrease in pregnancy rate and commonly result in permanent infertility in the bull. **Observation and intervention are essential!**

Prevention of this condition is best achieved as outlined above, by deliberate pre-exposure of new bulls to a small number of females (low workload) well before the joining so that they are exposed and can develop immunity to the herds’ pathogens prior to the high workload of the joining period.

Positive fertility outcomes are a significant driver of profitability in beef breeding enterprises, but this requires informed and active management!

HVC Production & Breeding.

HOW TO REGISTER with

STOCKLIVE ELITE

Follow these easy steps to start bidding:

Visit www.stocklive.com.au using your desktop, laptop, iPad, iPhone or Android device. NO App required.

Select the **bid** icon beside the sale you wish to bid on.

If you're new, select **register**, and complete the form with all your details, **accept sale conditions**, select **create bidder registration**.

You will receive an email from StockLive. Select "**Confirm my bidding account**" to set your password and **accept Bidder Account Terms & Conditions** and **Privacy Policy** followed by **create my account**.

Congratulations! Your StockLive account has been created and your bid request is pending. You will be notified via email when your request to bid has been approved.

Existing users, follow steps 1 & 2, select **login**, enter your details followed by the **request to bid** icon beside the sale you wish to bid on and then **accept** the terms.

On Sale Day, follow steps 1 & 2, select **enter auction** to watch, listen and purchase when the sale is flashing **LIVE**.

Invoicing and delivery will be carried out as per your registration details by the respective Selling Agents.

The first of the Barwidgee 19280 sons to be auctioned. By Rennylea L519, we are watching his progeny with great interest. T175 is out of a dam by the well proven Weeran Hooper. T175 has good depth of heel with good feet. He is a bigger frame bull with a clean skin, attractive with moderate muscle. A calving ease bull with good performance, with excellent IMF in the top 7% for the breed and good fertility and indexing. Grading a 6!

We are super excited with the Mainland progeny coming through the Weeran program. Mainland himself had a lot of presence and his sons catch your eye as well. The apple doesn't fall far from the tree when looking at his progeny. The Mainlands are excellent type with very good structure across the board after assessing all progeny. His calves are consistently in the top grading for structure and phenotype. T25 is a Mainland embryo from our Stoneypoint Skye R812 flush. You will see a lot of embryos coming through this sale from our donor herd. A large frame, deep sided bull with great capacity. Excellent grade 6 bull, being one of the heaviest on the scales in January, with fantastic growth ebv's all top 12%, excellent scrotal top 2% with a good set of canon balls, and excellent carcass weight in top 1% and EMA top 7%.

T151 has a very nice performance data graph out of an Ascot Hallmark daughter from the well known Weeran Prue family, who goes back to our donor dam M65 out of Millah Murrah Prue F141. M65 has already produced a number of sale quality bulls. We have calving ease, magnificent growth with 600 day weight being top 6% and 400 day weight top 8%. Very fertile with a good set of canon balls measuring 42cm. He is long bodied, slick skin and excellent forward of the shoulder. Carcass weight excellent with good EMA.

Get a load of these big nuts...44cm! Woah! The second biggest in the catalogue! One of the soundest bulls in the sale by Clunes Crossing Dusty son and out of a Sydgen Enhance daughter. Enhance has consistently performed in the Weeran herd. Moderate frame and a well laid in shoulder and very nice shape, who will produce daughters who are good calvers. A top grade 7 on Dick's GTS grading system.

A favourite bull in the sale! A magnificent Mainland son out of a Bruns Blaster daughter going back to our donor cow J6, who was industry leading in her time. He stands up well, good depth of body with a nice slick skin. Very strong calving ease and growth profile, with top 1% Carcass Weight, top 15% EMA and excellent Retail Beef Yield and promising marbling. The highest grade 7 for the GTS grading. For the Igenity Beef Profile genomic testing, he was one of the lead bulls we tested for Tenderness and Marbling. **Used heavily in the Weeran herd.** A very good example of what Mainland can produce.

One of our favourite Mainland sons by our favourite dam, VHM33 who has produced four sons who have all made bull sales! A bigger frame son with incredible calving ease. Very quiet, good EMA with positive fat. His results were excellent for tenderness with a 10/10 in the Igenity dna testing. **Has been used at Weeran over heifers.**

An ET sibling to T36 by Mainland out of our donor cow Stoney Point R821. Alec was super excited with the capacity in this bull... 'we love him - so thick and great depth of body!' He oozes carcass yield and is flaming massive! One of the heaviest in early January packing on the kgs. He has growth, carcass weight, ema, retail beef yield and imf and will yield well. It's all documented right there! Grading a 6.

The first of the Myers Fair N Square sale bulls on offer, out of a Sydgen Enhance daughter. Myers Fair-N-Square improves body shape producing heavily muscled cattle. He has produced cattle in our program which are as thick as a Blue stone block and yield for carcass weight & retail beef yield which surpasses expectation. T101 is from the well known Witherswood Jedda female line out of a first calf heifer. He is a curve bender for calving ease and growth. He has a huge EMA at top 9% and carcass weight top 6% with fantastic indexing.

The first son to sell from our new AI sire, Connemara P64 who is a sire that has freakishly good data. P64 has elite weight gain and carcass weight, with fantastic IMF and EMA and indexing, and all with calving ease! Terrific calving ease here being passed down the Gar Twinhearts pedigree line. With our well known Weeran Hooper on the dam side, it's a great combination. Out of a first calf heifer, with NFI very good alongside very good growth ebv's. A heavily muscled bull with medium frame.

So much to like about T112. To start with he is dead dog quiet! Secondly a Mainland son, and Mainland has graded so well across the board for all progeny, and T112 comes in with a grade 6. On the maternal side, he goes back to our donor dam Witherswood Zena and Baldrige Beastmode, and is out of a first calf heifer. Then you look at the data profile and it's an impressive graph. Calving ease, growth, carcass weight and IMF. Look at his massive nuts at 44cm!!!! No wonder his Scrotal ebv is top 3% for the breed! Very good structure and a nice muscle pattern.

Huge calving ease here, with excellent milk, and fantastic carcass with EMA in the top 11% for the breed. Fantastic indexing with all indexes in the top 9% for the breed. A very well muscled son of P64. Weeran M51 has produced three male calves, with two being bull sale quality with the third male being a U drop calf.

Witherswood Bronco's Dam CWJL0186 has many runs on the board, just like her son Bronco, who is one of our favourite reference sires in the Weeran herd. L0186 has already had bulls sold through the program, and T64 is an embryo sibling to T50. A Compass/Witherswood combination who has very good feet, thick bodied and deep sided with a slick skin. He is a medium frame and would be an ideal vealer bull. Very good growth ebv's, milk and feed efficient.
